## Wacom bamboo cth-670 pen not working

Intuos, Intos Pro, Bamboo, Grater, etc. Serafina Posts: 2 Joined: Saturday 24. February 2018, 20:25 Postby Serafina » Saturday 24. February 2018, 21:03 Hi I'm trying to use my CTH-670 on the new device with Windows 10 installed on it, and the pen does not work. It reveals that the pen is there when hovering over the tablet but does not take any input. Touch it with my hand just reads the input, and it behaves like a mouse (side buttons work like mouse 4 + mouse 5 etc). I tried to install the latest drivers and did nothing, after restarting my computer I tried to open wacom preferences and i was greeted with a subscriber not found a tablet supported on the message system. I tried to restart the services. I tried to uninstall the drivers and install the old drivers as I figured it is an old tablet model. Same thing. I'm not sure what to do, I searched the forums to no avail, and Google didn't have any help either. I looked at hardware management and couldn't find any wacom devices in the human interfaces tab, just a load of HID-compatible devices etc. I tried to explore the device in devices and printers, which at first told me that the problem was the tablet was a USB 2.0 device and was connected to the USB 3.0 port. So I tried to connect it to port 2.0 and it only gives me the same error, even though it's in the correct port. Windows is fully updated after a new installation, and none of the driver versions available on the wacom website work. I really appreciate some help wacom1 posts: 897 joined: Tuesday 29. November 2016, 09:46 Postby wacom1 » Sunday 25. Feb 2018, 17:51 First attempt to separate and reinstall the tablet from the driver reset. - If it doesn't work: Unplug the tablet, uninstall the driver, restart Windows. Remove all remaining Wacom entries in device management. If there is a 'HID compatible mouse', check the details, if it refers to Wacom and then remove it as well. Then attach the tablet again - if possible using a USB2 port, not the hub. Device management must find HID devices without showing an error. Then pause the antivirus program and install the driver. Alezzio Posts: 2 Joined: Saturday 15. December 2018, 13:59 Postby Alessio » Saturday 15. December 2018, 14:08 I am having the same problem on the same device model. I followed all the tips above, but the tablet was not detected at all. The Wacom Desktop Center app says so (no device is connected) although the LED in the tablet interacts with the finger and pen input as expected, only the finger moves the mouse pointer on the screen. Another update drivers from December does not work, I implement a clean installation before installing new drivers, but to no avail. Specifications of my system: Windows 10 HomeVersion 1709OS Build 16299.846 Wacom5 Functions: 1196 Joined: Tuesday 8. August 2017, 14:35 Postby wacom5 » Monday 17. Specifications of my system: Windows 10 HomeVersion 1709OS build 16299.846 Wacom desktop center? It appears that you have an incorrect driver installed. CTH-670 is not supported by a driver using the Wacom Desktop Center. Please remove the current driver you have installed and install the compatible driver from here: . Scroll down and download the driver for the previous generation of products - driver 5.3.5-3 need immediate help? Contact support: Alezzio Posts: 2 Joined: Saturday 15. December 2018, 13:59 Postby Alessio » Monday 17. December 2018, 11:28 Thank you, it now works well. You are accidentally trying to use the latest drivers (DOH!) Another update drivers from December does not work, I implement a clean installation before installing new drivers, but to no avail. Specifications of my system: Windows 10 HomeVersion 1709OS build 16299.846 Wacom desktop center? It appears that you have an incorrect driver installed. CTH-670 is not supported by a driver using the Wacom Desktop Center. Please remove the current driver you have installed and install the compatible driver from here: . Scroll down and download the driver for previous generation products - driver 5.3.5-3i i did exactly as I said but still does not read my pen? I have Windows 10 and only have a driver 5.3.5.3 installed and restart my computer several times but still my tablet only responds to my finger by touch. Back to pen discs jumping to my Wacom Bamboo CTH-670 tablet was working well on my Windows 10 laptop a month ago, but now it won't record the pen or work touching, just working buttons. The panel will light up when you touch it but do not light if the pen touches it. I have tried to reinstall the latest drivers (5.3.5-3) and a few older versions, but nothing has changed. Restarting Wacom's technical services in Windows services allows me to move the cursor by touching the panel but not with the pen (but restarting this service causes the buttons to stop working altogether). I have an old laptop running Windows 8.1 and the tablet works well with the pen there so the tablet/pen itself does not seem to be the problem. Wacom tablets are one of the most used, reliable, and sought after pen discs. People All over the world you know wacom pen devices tablet. And people who deal with graphics swear Wacom. But, sometimes, devices from Wacom fail to work too. The reason behind the Wacom pen doesn't work may be something relevant to your device, but most often it may be a simple glitch, something related to drivers, or some other thing. So, let's discuss what might be the reason and how to fix the wacom pen issue does not work on Windows 10. How to fix the Wac tablet pen does not work on Windows 10 as I said, there are several reasons that might cause your WACOM pen to stop working. The first thing to do is to implement basic troubleshooting, and proceed with a solution accordingly. While facing Wacom Pen does not work the problem, go some directly to play with driver settings. Refrain from doing so. The first way: To restart Wacom tablet services to run different programs as well as devices, Windows works many services. Sometimes, restarting services related to a problem can solve the problem. As it's complicated it may seem, restarting a service to fix wacom tablet pen does not work a problem is not difficult at all. Let me show you how: Step 1: Press the Windows + R keys at the same time to open the command playbox. Step 2: In the run box type services.msc and then click OK or press Enter. Step 3: This will open the service window with the service list. In the menu, look for the Wacom tablet service. For different Wacom tablets, the service name is different. The service name of your Wacom tablet can be one of the following: Wacom Profession TabletServiceWacom Touch Keyboard service and wacom consumer service handwriting pad as you find the service, right-click on it. From the context menu, click the restart button. If the restart button is gray, it means that the Wacom service is not running. In this case, click the Start button. Test your tablet pen to see if it works. If not, it's time to play with wacom driver. Method 2: Check the WACOM Tablet USB cord to see if the WACOM USB cable is connected correctly. You can try to remove the USB cord and reinsert it from both ends of your tablet and computer. Keep an eye on the small LED light on the tablet; if this does not help, make sure that the wire is working properly. Most likely you have a USB tablet cable that has a small USB pin; Try to test the cable on any other USB micro-compatible device. Most Android phones and chargeable gadgets still have Micro USB charging holes. If your cable looks fine, then go to the next step to fix the Wacom pen does not work on Windows 10. The third way: Changing the Wacom Pen tip the next thing to fix the Wacom pen problem is trying a new tip on the Wacom pen or tablet pen. If you don't know how to change the hint, see the tablet's user guide. If changing a party doesn't help either, then it's probably your Wacom tablet or computer wrong. Try the following method. 4: Restart your computer unplug your Wacom tablet from your computer. When you remove it, restart your computer. Tablet plugin back to your computer and see if your pen works or not. If not, try the fourth method. Now on, we'll see if your computer is messing with your Wacom tablet and pen and causing the Wacom pen not working the problem. Method 5: Reinstalling wacom tablet driver This way to fix Wacom pen does not work on Windows 10 is most likely going to solve the problem for you. Sometimes it happens that the current driver gets damaged or out of date with the Windows 10 update. If the Wacom pen isn't working, try the following steps to reinstall the Wacom Tablet driver: Step 1: Disconnect your Wacom Tablet from your computer. Step 2: Open hardware management. To do this, you can either press windows+ X keys simultaneously on your Windows 10 pc. Or right-click the Start button. Either way, a list will appear; Step 3: This will open the hardware management window. There, look for human interface devices; click on it to expand their options. From the extended menu, right-click on the Wacom Tablet driver and select the option to uninstall the device. This will remove the Wacom tablet driver from your computer. Step 4: Download the latest wacom driver for your tablet model compatible with your current operating system, this is Windows 10. You can search for and download the latest compatible driver from the Wacom website. Don't forget to look for compatible products before downloading a driver. If your device is not compatible with the latest driver, you can scroll down on the Wacom site and find product compatibility with previous drivers. Download the driver to your computer. After you've downloaded the compatible driver, install it on your Windows 10 computer. To install the driver, you just have to double-click on the downloaded driver file. It will automatically run the installation process. When you're done, restart your computer, and then connect your Wacom Tablet. Test whether the Wacom pen is running well. Method 6: Re-update Windows 10 updates Windows 10 updates sometimes mess things up on your computer. If your Windows 10 computer has been updated recently, it is quite possible that it has made your WACOM pen to stop working. You can go ahead and try uninstalling the latest Windows 10 update and see if things work for you. To uninstall the Windows 10 update, do the following: Step 1: Press the Start button on your computer to open the Start menu. In the search box of the Start menu, type settings. Step 2: This opens the Settings window. Look for the update and security section, there by clicking on the Windows Update option. Step 3: On the right side of the Settings window, click View the update log installed under the Update Status section. Step 4: From the new screen that opens, click the uninstall option. Step 5: This will open a new window with a list of all the latest Windows 10 updates on your computer. Scroll down and select the latest update in the Microsoft Windows section, to the right On the update, then click Uninstall. Step 6: When the update is complete, restart your computer, and then reinstall the Wacom Tablet. Check if it works well. Way 7: Installing the former Wacom driver is the last thing for you to try to fix the Wacom tablet pen does not work is installing the previous Wacom driver. It is also known to undo driver updates. For this, you have to uninstall the current Wacom driver, and then install the previous version of the Wacom driver. To do this, follow the following steps: Step 1: Run the window. To do this, press the Windows + R keys simultaneously. In the run window type devmgmt.msc and press Enter. Step 2: This will open the hardware management window. From the list of devices, click on the human interface devices to expand them. From there, right-click the Wacom Tablet driver, and then click uninstall the device. Step 3: Go to the Wacom website and download the previous version of the compatible Wacom driver from there. You can only find it less than the latest version. As suggested in the fifth method, do not skip the search for device compatibility. Step 4: Now, double-click the downloaded Wacom driver to install it on your computer. Step 5: Restart your computer after installation. As an additional step, press Windows + R again to open the playbox, then type services.msc. Now, as shown in the fourth method, start the Wacom tablet service. Find out if this method worked for you. Close the words Does your Wacom pen not work yet? Then there must be some issues to be addressed to the experts. You can always get some help from the Wacom technical support team regarding the Wacom pen does not work the problem. They have support centers in many major countries. When you do this, do not forget to mention what troubleshooting you have done so far to solve wacom tablet pen does not work the problem. Issue.
